

LIVERMORE TARPLANT (DEINANDRA BACIGALUPII)

California Native Plant Society List 1B

Description

Livermore tarplant is an aromatic, annual herb in the aster family (Asteraceae). The stems are pale or purplish, up to

16 inches (40 cm) tall, branching, and glandular-hairy. This species has undivided, narrow leaves and many small, daisy-like, yellow flower heads. Livermore tarplant flowers from June to October.

Habitat

It grows in poorly drained, alkaline meadows, especially near scalds

Range/distribution

Livermore tarplant is known only from two populations near Livermore in Alameda County.
